

JB THERMAL THERAPY

J.B MEDICAL is a South Korean Company, which is one of the largest and fastest growing companies in India in the field of healthcare industry. J.B MEDICAL provides the latest and innovative wellness & daily need products, which has generated a lot of interest and acceptance in the recent times. J.B MEDICAL invites the Organizations, Companies, Business houses and Entrepreneur with a zeal and motivation to join hands to set-up center across India. J.B MEDICAL has Massage Healing Therapy with the motto love, health & prosperity.

Wellness is a Win-Win Business!

- Trillion dollar growing industry
- Worldwide scope
- Never ending demand
- Great profits!

Come, join the Revolution...!

USP of J.B Medical Thermal Therapy Centers

- Huge Demand
- Low Maintenance
- Rapidly growing sector
- Respectability
- Little or no risk
- Recognized Brand
- Rapid Payback
- Joint Venture with leading South Korean Company

TANTUM CHAIR

J.B MK-9000 Moxibustion Machine (Tantum Machine)
Imported from South Korea

J.B MK-9000 Moxibustion Machine is based on the principles

1.Moxibustion

2.Low Frequency

3.F.I.R.(Far-infra red rays)

Moxibustion is a traditional mode of therapy that involves medicated heating of acupoints to provide relief and cure of some of the difficult forms of ailments. It uses a material called moxa, a Chinese Mugwort leaf which is fragrant and easily gets ignited. It is processed into Mugwort wool for clinical use. Moxibustion has a long history in East Asia, and it usually refers to traditional therapeutic technique of heat stimulation of affected area by applying ignited Mugwort or other medical herbs. It plays an important role in the traditional medical systems of China, Tibet, Japan, Korea, Vietnam, and Mongolia. It is based on the theory of meridian system of the human body. Moxibustion is also used in regulating functions of the body to improve and rectify the disturbance and dysfunction of certain organs in the body. Low-frequency electrical stimulation (LFES) is an acupuncture technique that replicates the benefits of resistance exercise through stimulation of muscle contraction. In skeletal muscle, insulin or IGF-1 plays critical roles in maintaining protein metabolism. Electrical nerve stimulation can reverse spinal cord injury nerve damage in patients. Researchers have found that nerve stimulation can improve the function of peripheral nerves damaged by spinal cord injury. Surprisingly, without modifying their exercise or diet, the LFES does cause significant effects on decreasing waist circumference, abdominal obesity, subcutaneous fat mass, and body fat percentage. Low-frequency (LF) treatment involves pulses ranging from 1 to 20 cycles per second and are suitable for the treatment of chronic pain.

Uses of Low Frequency:

1.Promotes blood circulation: It activates metabolism, promotes blood circulation and hence gives good effectiveness to the inflammatory diseases.

2. Adjusts the function of all glands: It promotes release of digestive liquids, controls the release of the stomach acids, and controls the thyroid gland and pancreas hormone.

3.Good Absorption: It enhances the absorption power of the whole body. In nutshell, low frequency therapy activates the function of all internal organs and thus enhances their life span. Far-Infrared Rays (or FIR) can stimulate the cardiovascular function and has been found to be an ideal way to maintain cardiovascular health in American astronauts during long space flight, according to NASA. FIR and the gentle tissue warming has also been shown to help improve the health of the cells that line our blood vessels, which if left untreated may increase the risk of heart disorders. Far-Infrared is also excellent for detoxification and helps lymphatic cleansing. Scientists in Japan report that in the FIR treatment of clogged capillary vessels, heat expands the capillaries and then initiates the start of a process to dissolve hidden toxins.

It promotes the elimination of fats, chemicals and toxins from the blood, poisons, heavy metals, carcinogenic substances, lactic acid, free fatty acids, and subcutaneous fat associated with aging and fatigue, excess sodium associated with blood pressure, and uric acid. When toxins accumulate, blood circulation is blocked and cellular energy is impaired.

TANTUM CHAIR

J.B MK-9000 Moxibustion Machine (Tantum Machine)
 Imported from Imported from South Korea (Rs. 1,00,000/-)

- Chronic ulcers
- Deficiency-cold syndrome in surgery
- Acute abdominal pain of cold syndrome
- Vomiting
- Dysentery
- Urinating Pain
- Infantile Diarrhea
- Scrofula or the cervical TB
- Pulmonary tuberculosis
- Sores without ulceration
- Asthenia-cold syndrome
- Labour Pain
- Postoperative Pain
- Neck and Back Pain
- Endometriosis
- Arthritis
- Sports Injuries
- Multiple Sclerosis
- Fibromyalgia
- Painful Diabetic Neuropathy
- Spinal Cord Injury

THERMAL MAT

J.B MK-9900 Thermal Mat

Imported from Imported from South Korea

J.B MK-9900 Thermal therapy mat is a full body device that provides not only relief to the entire body, but also provides the usual relaxation and rejuvenation that follows a good sleep. It has four therapeutic components that combine in different ways to bring about relief from pain and various health issues of the back and the whole body: heating, acupressure, moxibustion and Far Infra-Red rays. Our cells are active when the body temperature is between 36.5 degrees to 37 degrees. It is then when our immune system also comes into action. Life activity can not take place if the temperature drops by even one degree from the lower point. Unlike other thermal mats available in the market, the outstanding feature of this mat is that it is embedded with stones from rocks, which on heating release Far Infra Red Rays that work on excess fats, activate vital organs and heal tissues. What does thermal mat do? It increases extensibility of collagen tissues, relaxes muscles, provides pain relief, and increases blood flow. It is a kind of alternative healing, that utilizes warm heat to alleviate pain and improve health. When warm heat is absorbed by body it accelerates cell metabolism. It gets rid of today's most common ailment that is neck pain and back pain. Moxibustion is a special technique used for recovering energy applying localised heat on different parts of body. Moxibustion is a treatment method that infuses positive vitality, that is warm energy, into the body. It relieves from chronic pain and auto immune disorders. It helps metabolism and increases Immune system vitality, increase number of red and white blood cell and improve blood flow Acupressure is an ancient techniques used to eliminate the blocked flow of energy in the body. It cures cells, corrects the frame, stimulates pressure points, promotes blood regeneration. When acupressure is applied, there is a stimulation of endorphins (the happy hormones) as well as other hormones. The energy flows through the various channels nourishing the tissues. Acupressure helps internal organs to correct imbalance in digestion, absorption and energy production. Ceramics studded in the mat are designed to generate Far Infra-Red (FIR) rays that penetrate deep into the body to provide relief. These rays bring about various beneficial effects on the body. They make the body warm, increase the body temperature and relax the muscles properly. They act as anti-aging agent, by recovering the wounded tissues in the body. They induce self cleaning of blood and improve the circulation, nutrient and drug carrying and delivery capacity of the blood circulation system. They maintain the body moisture levels to normal, remove waste matter from the body and help nutrition breakdown to maintain the nutritional balance in the body. How much you sleep is not important, how well you sleep is important. A person with the life expectancy of 80 years spends as many as 30 years sleeping in the bed. It for this reason the who body therapy by our scientifically designed, J.B MK-9900 thermal mat makes it all the important.

THERMAL MAT

J.B MK-9900 Thermal Mat (Rs. 65,000/-)
 Imported from Imported from South Korea

BENEFITS OF BELT

- Abdominal Fat
- Intestines Care
- Sexual Problem
- Liver Care
- Digestion
- Kidney Care

- Back Pain
- Sciatica
- Poor Blood Circulation in Legs
- Slip Disk
- Nerves Stimulation
- Spine Care
- Relax Muscles
- Relieve Body Pain

- Knee Pain
- Swelling
- Calf Muscle Pain
- Feet-Swelling
- Diabetic Foot
- Varicose Veins
- Numbness
- Cold Feet
- Sciatica
- Thigh Fat
- Hip Joints Pain

BENEFITS OF MATT

- Spine Care
- Stimulates Nervous System
- Relax Muscles
- Deeper Sleep
- Boost Immunity
- Increase Energy
- Relief in Body Pain

- Improve Respiratory System
- Health Heart
- Better Heart
- Better Digestion
- Kidney And Liver Care
- Reduce Body Pain and Swelling

- Prevent Piles and Constipation
- Irregular Periods
- Menstrual Relief
- Uterus & Prostate
- Infertility

THERMAL BELT

JB MK-90 Thermal Belt

Imported from Imported from South Korea

J.B MK-90 Thermal therapy belt is designed to give relief from pain and improve the overall health and physical fitness in many ways. It is called thermotherapy or thermal therapy belt because it uses heat (thermal) to provide relief and start healthy mechanisms in the body. This is actually a kind of alternative healing which utilizes warm heat to alleviate pain and improve health. When warm heat is absorbed by body, the metabolism of cells to do the repair work and generate new cells is enhanced. The cellular waste accumulated in the body starts getting discharged through the sweat. Cellular waste builds within body because of the toxic substances expelled by the organs. External heat helps drain this toxin through sweat induced by the heating of the belt. Unlike other thermal belts available in the market, the outstanding feature of this belt is that it is embedded with stones from volcanic rocks, which on heating release Far Infra Red Rays that work on excess fats, activate vital organs and heal tissues. Thermal therapy has various benefits: purification of blood, soothing of nerves, circulation of energy. To put it simply, thermotherapy is a heat therapy that increases the body temperature for pain relief, body health by the use of hot bath, moxibustion and thermal products such as thermal belt. It is effective when body becomes warmer and releases HSP (Heat Shock Protein), a kind of protein which is made by themselves when the temperature of cells is high. Thermotherapy increases body temperature and more endorphin (happy hormones) are secreted and the number of immune functional cells also increase. The feeling of well being is heightened in a patient. What does thermotherapy do? It increases extensibility of collagen tissues, relaxes muscles, provides pain relief, and increases blood flow. It is a kind of alternative healing, that utilizes warm heat to alleviate pain and improve health. When warm heat is absorbed by body it accelerates cell metabolism. It reduces the pressure on blood vessels and nerve root. It improves blood circulation and reduces the lumbar pain. There are four major areas where thermotherapy is effective: purification of blood, removal of toxic waste, cell activation, circulation of energy, and soothing of nerves. One of the commonest reasons for backache is mental stress. When one is fatigued due to stress and strain, it weakens muscles of spine and provokes back pain. Secretion of adrenaline, dopamine, cortisol hormones takes place due to stress. The speed of heart beat becomes faster and muscles are cramped up. Finally, it causes pain. Pregnancy, abnormal obesity put a strain on the spine resulting in backache. The change of spine posture during pregnancy is the phenomenon in which the muscles and tendon around waist that sustain lumbar region and the embryo become loose. Backache is caused due to a weakened waist. The thumb rule for measuring belly fat risk is, the men whose waist measurement is over 90cm and the female whose waist measurement is over 80cm have the risk of high blood pressure and heart disease. Formation of visceral fat that forms around the surrounding area of internal organs and subcutaneous fat, which means below the skin, forms around the surrounding area of the abdomen area, is also called internal obesity. Excessive accumulation of fats leads to abnormal suppression of the organs resulting in high absorption of fats in the liver till it completely changes and damages the liver. This also has a very high risk of diabetes.
